

Matt Wellman

SENIOR SOFTWARE ENGINEER · FABLETICS

mattwellman.info · (502) 331-1825 · williamwellman98@gmail.com · linkedin.com/in/matt-wellman-154301a3 · github.com/Mass812 · Louisville, KY (Remote)

PROFILE

Self-taught engineer with a science background. My strength is system design and infrastructure — real-time event platforms, inventory systems, and the developer tooling that makes the hard work easier for everyone else. I support omni retail systems across 134 Fabletics stores in the US, 10 across the EU, and 15 Savage X Fenty stores, and I am the primary engineer on the Fabletics FIT app for iOS and Android.

RECOGNITION

Global MVP Recognition Award — individual, company-wide	June 2022
All Star Team Award — RFID Project Team, by nomination: “one of the fastest and most effective technology rollouts in our industry”	Early 2026
Inaugural Masters of Innovation — industry award to Fabletics (Let’s Talk Supply Chain & SupplyChainBrain, at Manifest) for the RFID programme I led the core architecture and inventory-stack integration on	2026

EXPERIENCE

Fabletics — Retail Backend

October 2022 – Present · Senior Software Engineer (Oct 2024–) · Software Engineer II (Aug–Oct 2024) · Omni / Retail Software Engineer (Oct 2022–Aug 2024)

- Led the core architecture and integration of **RFID** into the existing retail inventory stack. Full store rollout in six months, on time and within budget — replacing twice-yearly physical counts with inventory ownership visibility every 30 minutes, writing to production inventory across all 159 stores.
- Built the **Kafka event framework** behind RFID: explicit POS, movement, sold and adjustment events spanning the Fabletics and Savage X Fenty brands — multi-brand topic design, consumer-group management, and a per-store canary rollout. Instrumented monitors and alerts before launch.
- Consolidated 15+ divergent inventory-movement code paths into one consistent pattern and fixed a transfer defect that silently duplicated manufacturer-direct inventory.
- Built the **BOPIS and receiving reconciliation** systems — the receiving job from the ground up, stored procedures through NestJS service and endpoint — keeping inventory accounting honest against physical movement.
- Restructured the retail backend into a modular **NestJS monorepo** serving Fabletics, Savage X Fenty, JustFab, ShoeDazzle and Yitty — canary and stable GitHub Actions pipelines, Jest and TSC gates, single-command scaffolding. Led the Amazon Today backend integration on that framework.
- Migrated legacy CRON workstreams into the monorepo, packaged Smarty address validation as a shared NestJS library, and wired the BOPIS order lifecycle (cancel, auto-cancel, movement blocking).
- Added nightly Postman/Newman API regression to CI with on-demand environments; shipped seven improvements to an internal Electron/React API client and an AI-assisted delivery routine; delivered the SMS platform full-stack.

Fabletics — FIT Mobile App

March 2021 – Present · Primary Software Engineer (Oct 2021–) · Software Engineer, Jr. (Mar–Oct 2021)

- Sole full-stack developer of a member-exclusive fitness app for iOS and Android — React Native and TypeScript over DynamoDB, Strapi, Postgres, Terraform and GraphQL; responsible for every feature from creation through app-store deployment.

- 4.8★ on iOS (5,475+ reviews) and 4.6★ on Android; 548k lifetime downloads; live in 12 countries with content in Spanish, French and German — 900+ video classes, 40+ programs, 100+ meditations.
- Shipped the EU launch, app-wide pagination, favorites, shoppable outfits, content filters and internationalization; redesigned DynamoDB access patterns (sparse GSIs, projection expressions), moved filtering server-side, integrated Branch deep-linking and Emarsys across five world regions.

Freelance — React & React Native Developer

September 2020 – March 2021

- Built client web applications in React with backends on Firebase and MERN — from marketing sites to internal business tooling, scoped and delivered directly with clients.

UPS Worldport — Safety Committee

June 2019 – August 2020

- Built a safety-auditing web platform (React, Firebase) replacing triplicate paperwork; approved by building managers and the Safety Committee Chairman and run in production; handed the codebase to UPS on departure.

Parse IO — React Native Developer

March 2018 – September 2019

- Client React Native applications for iOS and Android — from internationalizing existing apps with i18n to building video-streaming apps from scratch, on a remote scrum team.

Techstyle Fashion Group — Director of Security Operations

February 2012 – October 2018

- Led multi-site security operations; automated work-order intake, device tracking and trailer logging with self-built web tooling that cut manual workload and increased operational oversight — the work that led me into engineering.

SKILLS

Languages & Frameworks	TypeScript, JavaScript (ES6+), React, React Native, Node.js, NestJS, Express
Messaging & Events	Apache Kafka (multi-brand topics, consumer groups), RabbitMQ, event-driven architecture
Data	Postgres (incl. stored procedures), DynamoDB, MongoDB, GraphQL, Apollo Server, Firebase
CI/CD & Observability	GitHub Actions (canary & stable), Postman/Newman regression, Jest, service monitoring & alerting
Platform	AWS, Terraform, iOS & Android deployment, AppCenter/CodePush, Jenkins

EDUCATION

University of Kentucky — Chemistry & Biology (2005–2007) · Indiana University — Biochemistry (2004–2005) · Ivy Tech Community College (2003–2004)
